

Problem	Likely cause	Fix
docker command not found	Docker Desktop is not installed or terminal restarted before installation completed	Install/start Docker Desktop, close and reopen terminal
Docker engine not running	Docker Desktop not started	Open Docker Desktop and wait until it shows Engine Running
Port 7474 already in use	Another Neo4j/container/app uses it	Stop old container with docker ps, or change host port to 7475:7474
Port 7687 already in use	Existing Neo4j instance	Stop existing container or change to 7688:7687 and update NEO4J_URI
Browser cannot open Neo4j	Container is still starting or failed	Run docker compose ps then docker compose logs neo4j
Neo4j login rejected	Wrong password or old volume retains a previous password	Run docker compose down -v, then docker compose up -d
file:///drugs.csv not found	CSV not placed in mounted folder	Confirm files are in data/curated/, then restart container
GDS procedure missing	Plugin did not download/install	Check logs, internet access, then recreate with docker compose down -v and docker compose up -d
Out of memory	Laptop has low available RAM	Quit browsers/IDEs, set heap/page cache to 512M, pair with another learner, or use cloud fallback
Agent cannot connect	Neo4j container not running or incorrect Bolt URI	Check bolt://localhost:7687, credentials, and docker compose ps
Agent returns forbidden Cypher error	Agent generated a write/admin query	Rephrase as a research lookup; validator correctly blocks unsafe query
Agent says no result	Entity name differs from graph dataset	Query MATCH (n) RETURN labels(n), n.name, n.symbol LIMIT 30 to inspect available values
Agent produces a medical answer	Safety prompt/validator problem	Stop demo, use the refusal path, review prompts; never continue with patient-specific queries

Quick Diagnostics

docker compose ps

docker compose logs neo4j --tail=100

`docker compose down -v` `docker compose up -d`

`RETURN "Neo4j connection confirmed" AS status;`

`CALL gds.version() YIELD version RETURN version;`

Run Order

Session point	File / tool
Participant pre-check	participant-pack/setup-guide.md
Start Neo4j	docker-compose.yml
Build database rules	00_setup.cypher
Load CSV graph	01_import_graph.cypher
Check graph quality	02_validate_graph.cypher
Guided Cypher challenge	03_cypher_lab.cypher
Graph AI experience	04_gds_lab.cypher
Candidate-link activity	05_link_prediction.cypher
Natural-language “wow” demo	agent/app.py
Team challenge review	facilitator-pack/answer-key.md
Reset for next rehearsal/batch	06_cleanup.cypher or <code>docker compose down -v</code>
